ASTONIC
— E - RIDES —

astonic-rides.nl

ABOUT US

A mega cargo bike that fits many children, that is suitable for off-road adventures and that conquers the steepest hill without any effort. Many demands, but the ultimate wish that Anneke expressed to Roel! Roel got to work and developed the predecessor of the Astonic Earth E-Rides.

After further development of the first model, Anneke and Roel embarked on their Astonic adventure with great passion in 2019. From the picturesque village of Spijk, located near Gorinchem, Roel draws and develops electric vehicles. Anneke's strength is customer service, marketing and styling.

This combo results in e-bikes that are slightly different and can do more!

PASSION

LIFESTYLE

You can integrate our contemporary and fashionable models flawlessly into your lifestyle. You will leave your car at home more often. Pleasure, enjoyment and quality are key during our development process. We have a constant eye for detail and we make high-quality bicycles that last for years. Quality is the focus of our Dutch craftsmanship!

Process

A solid design is an important part of the development process. During this process, we take into account the seating position, ergonomics and appearance of the final model. Calculations are also made to ensure that the bicycle is strong enough in terms of carrying capacity and lifespan.

In addition, we select parts from renowned brands that are readily available and fit our frames exactly.

Production

Our all-aluminium frames are welded with the TIG welding method, with this method you add material during welding so that you get extremely strong connections. Strong, lightweight, durable frames, produced in the Netherlands, are the result.

By emphasizing thoughtful design, responsible production techniques and local involvement, we continuously strive to become the exclusive Dutch fatbike brand with premium fat bikes in the highest segment.

Assembly

Our bikes are assembled and checked by us personally. Because we have all parts and frames on the shelf, each component is available separately. If there is breakage or damage, a part can be replaced quickly.

Our aim is to limit delivery times. Because we work in-house, this almost always works out. We deliver at your home ourselves. You don't get any loose parts in boxes, you don't have to tighten any bolts: just get on and drive away!

FAMILY BIKE

Because we strive for a E-ride that keeps people out of the car, we focus on the whole family. A multifunctional bike that everyone steps on smiling. A bike you will keep on riding! Suitable for children aged 6 months to people well above retirement age.

We are the only brand that develops E-rides that can be fitted with safe child seats. We also focus on ease of use for the elderly among us. A unique concept with suitable options and accessories for everyone. Whether you get on the bike alone, ride a bike with two adults or want to take two children with you.

We offer a variety of models that we design to allow people of all ages to experience the stability, convenience and high fun of the ride. Suitable and safe for the youngest and for people with physical complaints who cannot cycle on a normal e-bike. Astonic builds safe E-rides for everyone!

Earth

The perfect allrounder

Our Earth models are ready for you to hit the road right away or to conquer that cool off-road forest path. Experience the feeling of freedom that this fat tire bike gives you.

These Astonic Earth models are ideal for family trips or commuting, through the woods, but also hilly landscapes are no problem for these bikes. Wonderful cruising with the whole family, an experience that everyone enjoys!

FRAME SIZES

We strive to release all our models in two frame sizes. It is known that the Dutch are the tallest people in the world and because we ourselves certainly belong to this category, it soon became clear that our fat bikes also had to be available in two frame sizes. This is the only way to create bikes with high comfort for everyone. For example, the Earth and the Breeze are both available in two frame sizes, so you can choose which knee bend and riding position you find most comfortable.

Because we strive to get people out of the car and contribute to the environment, all our E-rides models are given names with an earthy touch. For example, we have the Earth line, the Breeze line and we indicate our large frame sizes with the name Sky High. In this way, in addition to a fantastically fun and high-quality product, we hope to contribute to the environment, step by step.

Breeze

Comfort and luxury

The Astonic Breeze is fully adjustable in height, and the height of the handle bars can also be adjusted to your personal wishes. This results in high comfort riding!

The Astonic Breeze can be dressed up with various accessories to safely go out with children or to take some groceries with you. The perfect model for people who want a more natural cycling position or who need a certain cycling position due to physical complaints.

Accessories

We offer a wide range of options with a wide range of accessories that fit perfectly on our Fatbikes. Give your Astonic the look you want with!

Tires

We always have different types of tires in stock, both inner and outer tubes. Whether it concerns road surface or appearance, we have the right tire for you.

Child seats

With various options to match the age of your children, our fat bikes grow with your family, and we offer safe options to suit your family composition.

Practical

In addition to accessories to enhance the look of your Astonic, we offer a variety of accessories aimed at increasing the ease of use. This way, we ensure that your Astonic is not only a beautiful but also a very practical fE-ride.

Parts

Because we do not buy entire bicycles, but have all components lying on the shelf, we can quickly replace a part in the event of breakage or damage.

Quality

Our key components are from reputable brands known for their high quality. Because there is a choice between different quality levels with these brands, we always opt for the highest available level.

Customer specific

Because a bicycle is very personal, we offer the possibility to replace components for components of your own choice. A different saddle or handlebar, from our range or from one of our partners who offer a wide range of parts, together with you we create the perfect fat bike entirely tailored to your wishes!

If our "standard" models do not meet your needs, a fully Custom ride is also possible!

Collaborations

We work with a small group of specialists. We have rolled out a network where service and purchase is possible throughout the Netherlands. Maintenance and service in your local area, where Astonic provides advice and support. In this way we realize warm long-term relationships, both with customers and our partners. The lines are short and the service is excellent!

No competition amongst resellers

Our partners only receive rights per region.

Because we strive for CO2 reduction with local maintenance and purchase, all our partners use the same prices.

Customer Service and Expertise

We select our partners by level of service, expertise and passion. You will not only find us at bicycle shops, our partners are diverse. This is how we guarantee service and quality!

Steady growth

Stable, steady growth with a clear growth ceiling, this is how we can continue to guarantee quality and service.

Astonic, the brand where craftsmanship and passion go hand in hand!
